JSSC TR-1 JANUARY 1987

JOINT SERVICES SAFETY CONFERENCE

SYSTEM SAFETY PANEL

STANDARDIZED PROCEDURE
FOR SYSTEM SAFETY INPUT TO THE
DEFENSE TECHNICAL INFORMATION CENTER (DTIC)

By:
Mr. R. P. Kinzey (Naval Safety Center)
Mr. N. Kniepp (USA Aviation Systems Command)

For The Joint Services Safety Conference (JSSC)

THE FILE COPY

Approved for public release; unlimited distribution.

SUMMARY

Considerable system safety safety hazard analysis reports are developed under USA, USN, and USAF contracts and project orders. These reports are not always being submitted to DTIC. System safety reports in DTIC are not easy to retrieve using system safety engineering and management terminology. The purpose of this guide is to provide standard procedures and terminology for submitting system safety reports to DTIC for subsequent data retrievals.

UNLIMITED DISTRIBUTION "Approved for public release; distribution is unlimited."

- 1. Introduction: Currently, there are no standardized key words for system safety reports being submitted to the Defense Technical Information Center (DTIC). Retrieval of this data without key words requires DTIC to conduct extensive text searches to locate specific hazard analyses or other system safety reports. This procedure creates considerable time delays in obtaining historical data and generates excessive costs. To reduce costs and time, this technical report has been prepared to standardize key words and phrases for inputting system safety related data to DTIC.
- 2. System Safety: System Safety is defined by MIL-STD-882B, System Safety Program Requirements, as the application of engineering and management principles, criteria, and techniques to optimize safety within the constraints of operational effectiveness, time, and cost throughout all phases of the system life cycle.

A system is a composite, at any level of complexity, of personnel, procedures, materials, tools, equipment, facilities, and software. The elements of this composite entity are used together in the intended operational or support environment to perform a given task or achieve a specific production, support, or mission requirement.

3. DTIC System:

a. <u>General</u>. The Defense Technical Information Center (formerly Defense Documentation Center) is a component for the DoD scientific and technical information program. DTIC contributes to the management and conduct of Defense research and development efforts by providing access to, and transfer of, scientific and technical information for DoD personnel, DoD contractors and potential contractors, and other U.S. Government agency personnel and their contractors.

The DTIC provides access to planned, ongoing, and completed research activities through the following four data bases:

- (1) The Program Summary (PS) Data Base consists of projects which forecast and propose future research efforts.
- (2) The Research and Technology Work Unit Information Center (WUIS) Data Base contains research projects on work unit level that are currently being performed by DoD and NASA or under DoD contract.

- (3) The Technical Report (TR) Data Base consists of bibliographic citations to documents that convey progress or results of Defense sponsored Research, Development, Test, and Evaluation (RDT&E) efforts.
- (4) The Independent Research and Development (IR&D) Data Base contains descriptions of research projects currently in progress in industry which may have future applications to -- and compete for -- DoD contracts. IR&D records are generally considered proprietary information.

Currently, DTIC holdings include well over one million technical reports under computer control and an additional 300,000 documents available for manual searching. Because of the immense size of the data base, it is important that system safety personnel have a systematic method for inputting and retrieving data. A standardized set of key words, phrases, and procedures will provide that systematic method.

b. <u>Data Input</u>. DTIC Handbook for Users of the Defense Technical Information Center, DLAH 4185.8, provides a good guide on how to use the system and input data. In summary, reports are prepared in accordance with MIL-STD-847B format requirements. Fill out a DD Form 1473, Report Documentation Page (sample in Figure 1), and submit this form and two copies (follow appropriate security guidelines) of the report to:

Defense Technical Information Center ATTN: DTIC-FDAC Cameron Station Alexandria, VA 22304-6145

Obtain MIL-STD-847B and DD Forms 1473 from:

- Contract or project officers
- Technical libraries (normally)
- Focal points for military offices:

Air Force AF Publications Distribution Center

2800 Eastern Boulevard Baltimore, MD 21220-2898

Army publications channels

Navy Naval Publications & Forms Center

5801 Tabor Avenue

Philadelphia, PA 19120-5002

If you wish to be informed of the AD number assigned to the report, forward a completed DTIC Form 50, DTIC Accessions Notice (Figure 2), along with the DD 1473.

3. Standardized Procedure:

a. <u>Terminology</u>. To correct the current problem involving submittal, identification, and retrieval of system safety related data from the Defense Technical Information Center, use the following procedure for filling out DD Form 1473 (detailed instructions are on the back of the form):

<u>Blocks la - 7b</u> - Self-explanatory

 $\underline{Block\ 8a}$ — as appropriate, unless prepared for the JSSC System Safety Panel. If so, use "Joint Services Safety Conference."

Block 8b - 16 - As appropriate

Block 16 - (Supplementary Notation) - If prepared for the JSSC, use "prepared in cooperation with the Joint Services Safety Conference System Safety Panel." The JSSC is sponsored by the Service Safety Centers, U.S. Coast Guard Headquarters, and OASD (FM&P/S&OH).

Block 17 - (See procedure below)

Use the subject field and group structure listed in Figure 3. as appropriate. Leave the subgroup block blank.

For general use system safety engineering or management reports, use field 15 (military sciences) and group 05 (logistics, military facilities, and supplies). This field/group deals with logistics planning, procurement practices, and preventive measures. Therefore, it is appropriate for inclusion of general system safety engineering and management reports. Field 13 (mechanical, industrial, civil, and marine engineering) and Group 12 (safety engineering) should be specified as the second field and subgroup.

Block 18 - (Subject)

STREET, LAGGEGGE PRESIDENT REGULERY HEROTOPH PROPERTY PERSONS PROPERTY ANGESTED PROPERTY.

- (1) Preface key words, phrases, and subphrases with the following phrase: "Please use the following posting terms in the order listed: System Safety, . . ."
- (2) Use the Data Item Description (DID DD Form 1664) title as the key phrase; DI-SAFT-80101 (System Safety Hazard Analysis Report), DI-SAFT-80102 (Safety Assessment Report), and DI-SAFT-80106 (Occupational/Health Hazard Assessment Report).

- - (a) Preliminary Hazard Analysis (PHA) Report
 - (b) Subsystem Hazard Analysis (SSHA) Report
 - (c) System Hazard Analysis (SHA) Report
 - (d) Operating and Support Hazard Analysis (O&SHA)
 Report
- (4) For reports not covered by a Data Item Description (DID), use accepted system safety terminology.
- $Block\ 19$ (Abstract): Be sure to include the term(s) system safety, system safety engineering, or system safety management as part of the abstract.

Block 20 - 22 - Self-explanatory

4. <u>DTIC Assistance</u>: The Defense Technical Information Center (DTIC) is ready to offer assistance to anyone who needs and requests it. Call Data Base Input Division, Autovon: 284-7044 or Commercial: (202) 274-7044.
